5 Nasmyth Court | Houstoun Industrial Estate | Livingston | EH54 5EG

What We Do

Brightridge delivers secure, managed business grade broadband on BT lines, we handle all fault calls and management thereof on our clients behalf

We proactively manage the connection with 24/7/365 monitoring software, we will know within 2 minutes if the connection drops, allowing our engineers to investigate.

Fully trained and experienced UK based support desk, contactable by telephone or online ticket system.

DDOS Security

It's no secret that Distributed Denial of Service (DDoS) attacks are rising in frequency across the UK and all businesses - no matter what size or industry - are potential targets. The scale and intensity of these attacks are increasing with almost 278 DDoS attacks taking place globally every hour. With the average cost to a business at £350,000. It is vital that your business looks at the risks to assess if your current IT systems will protect you.

Our service is protected by Cisco & Arbor powered network with embedded DDOS protection

Protecting you from DDoS attacks 24/7/365. All traffic, during an attack, remains in a UK network ensuring a UK sovereign service. The chosen network has the highest-level accreditations with the world's most trusted security vendors, so there's nobody better placed to keep you protected.

Brightbridge has been Providing Network Design, Installations, Upgrades and Support since 2004. We use Best Practices to Deliver Robust, Secure and Efficient Data Networks, ensuring that your Business has Access to Data throughout the Day whilst also Working within a Secure Environment.

Brightbridge Design, Implement and Support IT Networks. We Engage with our Clients in Order to Fully Understand the Current and Requested Infrastructure.

What We Do

Your Data Network is Crucial to the Running of your Business, it Needs to be Available at all Times.

There are three main network connectivity options for your business.

Wired Networks: Traditional connectivity of servers, PC's and other networking equipment using Ethernet cabling mainly CAT5 and CAT6. Brightridge provides fully wired connectivity solutions, and will design and install structured cabling solutions to match our clients requirements.

Wireless Networks: Where wireless connectivity is required, either as a result of structured cabling not being possible, or for visitor/staff wireless device access, Brightridge services include wireless surveys and secure wireless infrastructure design and implementation. We install managed devices that provide secure access to the Internet for visitors to your business and secure wireless access to your corporate network if required.

Virtual Private Network (VPN): Brightridge provides this type of connectivity to clients as a means of accessing corporate data on premises from a remote location. We design these solutions ensuring the latest security requirements are implemented.

Contact Us Now for a Free Network Audit

Brightridge Defender is a Unified Threat Management Gateway designed to protect your network from known and emerging threats. Using proven technology these devices are designed to safely enable applications and prevent modern threats both internal and external.

DEFENDER

Searching for more information about high-speed internet connections?

Brightbridge has a direct partnerships with the UK's largest Full Fibre platforms, providing world-class wholesale connectivity to business. We are proud of our partnerships with leading industry suppliers in the IT sector. Relationships spanning across 20 years of service ensure you have the best technology available in the UK.

What We Do

Brightridge will plan, deliver and manage your business connectivity, giving you the best solutions at competitive prices from all the national suppliers. Our wholesale agreements mean that we can order and deliver services from all the major service providers in the UK today.

A leased line is a dedicated, fixed-bandwidth data connection. It allows data-hungry businesses to have a reliable, high-quality internet connection with guarantees of upload and download speed, uptime, and resilience. "Leased" refers to the connection which is rented by the Internet Service Provider (ISP) directly to a business, resulting in a service above and beyond what standard broadband provides.
